

Amendments to the Specification:

Please amend paragraph [020] beginning at page 4, line 12 and ending at page 4, line 16 as follows:

[020] The air moisture produced by evaporation from collecting receptacle 12 in recess 9 is flushed away by an air flow which, driven by the heat discharged by liquefier 8 in a flue between the rear wall of body 1 and an opposing cabinet or building wall, not shown, runs firstly through an intake duct ~~[[15]]~~ 30 guided along the bottom of body 1, then through recess 9 and finally via the flue and into the open air.
